PATENT APPLICATION 27943-403 P12662

ABSTRACT

A system and method for facilitating information interexchange between a wireless telecommunications system having at least one telecommunications device therein and an information service provider. A Business-to-Business (B2B) engine is connected to the telecommunications system for receiving realtime information related to telecommunications device within the telecommunications system. This realtime information is provided by the B2B engine the information to service provider, which consequently provides content data to the telecommunications device within the telecommunications system.
